EDUCATION

- Yangon University of Distance Education
  Final Year History (2016 – present)
- Yangon University of Distance Education
  Diploma in Information Technology (2015 – 2016)
- Y-Max University
  Diploma in Web Development (2021 – 2022)

OTHER CERTIFICATE

- Software Engineering (KMD Training Center)
- Querying Microsoft SQL Server (Microsoft)

LANGUAGE

- Myanmar - native tongue
- English - conversational
- Japanese - N5 and still learning

WORK EXPERIENCE

Management and Business Care

VB Developer (Jan 2018 – Dec 2020)

      I have worked at this job for 3 years and throughout these period, I developed and maintained Accounting Software (experience - auto calculate budget year end, CRUD of Sale, Purchase, Account Purchase, Account Receivable, General Ledger, POS), HR Management Software (experience - auto calculate overtime, payroll calculation report, Detail monthly report of each employee, attendance report, etc.), Supermarket POS (experience - CRUD data, Barcode, Voucher Print), Gold & Jewelry POS, Golf (experience - Golf club POS, Player Management, Match Record, Tournament and etc.) and some special customize Software.

Front-End Developer/ Digital Designer (Jan 2019 – Dec 2020)

      I created the UI/UX for the software and company website. Create the necessary software prototype and wireframe using Figma. By doing this, I also design my own logo, icon design, and feature pictures for usage in my front-end works. My primary goal while creating designs is to make it simple for users of software to engage with it. I often create vector illustration, Product Photo, brochure, pamphlet, and business card designs for the Digital Marketing Team to promote on social media and other platforms. I gain a lot of experience, design knowledge, and skills for this position.

Startin Point

UIUX Designer / Web Designer / Front-End Developer (April 2021 – Present)

      My talents were getting better here, more so. I have developed templates and form layouts for a variety of web applications utilizing HTML, CSS, JS, Bootstrap, and a few jQuery design libraries. Figma, Adobe Illustrator, and Adobe Photoshop were the tools I used for prototyping and wireframing design. The one that has given me the most experience is the television game show application. It was developed using the Angular and Electron frameworks. I created the majority of the wireframes and prototype. For the apps, I also created responsive pages, animations, and application design layouts. As a result, I learned a lot about design principles, critical thinking, game logic, and UX concepts. And I had improved my front-end development skills.

ABOUT ME

I am a software UI/UX designer, and I am capable of producing various software UI/UX design ideas. I'm adaptable and non-obstinate whenever it comes to design. I also welcome feedback, comments, and suggestions from other people for design. With the use of Draw.io, Figma, Adobe Illustrator, and Adobe Photoshop, I can produce prototype, wireframe, and mockup designs. I am also skilled in designing and developing templates by using HTML, CSS, JS, Bootstrap, jQuery, and Angular. I am capable of creating responsive designs that are compatible with PC, tablet, and mobile screens. I have backend thinking, database understanding, logical thinking, algorithm, issue resolving, and problem solving skills thanks to my expertise as a VB developer. As a result, I'm also interested in backend development, and full-stack developer is my dream career. I am a quick learner and enjoy picking up new technologies and skills from Google and other knowledge-sharing sources. I really enjoy working in a team environment and respect knowledge sharing with coworkers. I am a convenient, motivated person with a strong awareness of collaboration. Therefore, I do think that helping your company or organization with my innovative idea would be a triumph.
